Science Education for Gifted Learners-Keith S. Taber 2007-04-13 Science is central to our modern technological society, yet many of the most able pupils who could become the scientists of tomorrow turn away from science as soon as they have a choice in their studies. Science is often seen to be difficult or boring, and fails to engage or challenge those who are most suited to excel in scientific studies. This book asks what classroom teachers can do to make sure that their science teaching is stimulating and challenging for their students. Topics covered include: what do we mean by gifted and able children? gifted children that slip through the net challenging science through modelling asking questions in science exploring topical issues challenging science through talk after-school enrichment. Set in the wider context of debates about the provision for those labelled 'gifted' and 'exceptionally able', this book explores the

meaning of these categories, and considers what they may imply in such approaches as setting, streaming, acceleration and enrichment.

Effectiveness Service Advanced Skills Teacher {Gifted and Talented}. At the beginning this was in the Secondary phase {11 years to 18 years} but, by the end it was all through {4 years upwards}. This meant that, for a decade or so, I was involved in training staff to identify and effectively provide for their Gifted and Talented Students across 26 Secondary Schools and 200+ Primary Schools, as well as providing provision and connections to provision myself. My thoughts on identification and provision at the end of that decade are the substance of this book. It is written to be read by teachers, but it will also be of interest to the parents of G&T children, and to those children themselves, especially if they are being Home Educated, or educated in a context which does not meet their needs. It also contains a sample G&T policy and a training programme to help staff and institutions engage with the parents of G&T students.

Children with Special Educational Needs-Diane Montgomery 2013-05-13
Gifted pupils who also have special needs often receive provision for the special need whilst the giftedness is overlooked. Children with such double exceptionality can become depressed, frustrated and misbehave, and may not fulfil their potential. Based on international research and practice, this practical text enables the reader to identify highly able pupils with special needs, such as ADHD, dyspraxia, dyslexia and Downs Syndrome, and then make provision for them within the mainstream school. The book offers three emerging themes: creating a positive, constructive and supportive learning environment; offering a cognitively challenging curriculum; and engaging the learners in partnership to understand and manage their learning support. Whilst aimed mainly at teachers and students at both primary and secondary levels, this book should also be of interest to educators, researchers and educational psychologists.
